Hydraulic Fold Pull Type "Mulcher"

9 - SHANK IN TRANSPORT POSITION

1 1/4" x 7" Heavy duty shank available
3 - 15 shank available, 3 point or pull
type

Pull Type Hitch Assembly

COMPACTION WILL:

- **Decrease root penetration**
- **Decrease moisture and nutrient absorption**
- **Increase erosion due to water run off**

Compaction zones vary but normally start at 11 to 12 inches and are usually about two inches in depth. Allowing penetration just below this zone with a **MULCHER** will counteract the negative effects of compaction on yield potential.
